

Method of angle trisection: -
To trisect angle $\llcorner A B C$ draw arc $P N Q \&$ Segment $P Q$ as shown in figure.
Trisect segment PQ at points $R \& S$ by well-established method.
Draw perpendicular to segment $P Q$ at point $R$, which crosses to arc PNQ at point $U$.
Draw line parallel to Line UB through point $R$, which crosses to arc PNQ at point $T$.
Bisect angle $\llcorner$ TBU by Ray BM.
You will find that Ray BM will trisect the angle $\llcorner$ ABC.
i.e. $\mathbf{m}\llcorner\mathbf{A B M}=\mathbf{1 / 3} \mathbf{m}\llcorner\mathbf{A B C}$
